

Update Release Notes for version 5.57 - December 2022

Please be sure to clear the cache and cookies in your internet browser.

New Features:

- Datacap - DC Direct Payment Integration
- Shopify Support (Basic): Sync Transactions from an existing Shopify ecommerce site.
- Ticketmaster Stored Value Support
- Venuetize Payment Integration Setting

Bugs:

- Campaign Save Load issues - Fixed a filter issue on the products page.
- POS Devices - Customer field check marks are no longer erroneously unchecked when editing customer settings.
- Import - Fixed an issue where supplier info was erased if the field was left empty in the import file.
- Three Way Match - Fixed a loading issue when a user increased the number of items per page.
- Prestashop - Adding departments and categories to existing Site configs will now sync over to prestashop.
- Field Audits - Inventory Adjustments are now available on audit reports.
- POS Devices - Payment Processor Settings Child Property Types Not Displaying Appropriately
- Data Imports - Template names are now saved correctly.
- Quick picks - Fixed an issue where item description does not match item masters description
- Data Imports - Dept, Category, and Vendor are now created when importing items if they are new records.
- Corrected bug where the discount datepicker was not saving correctly.

OpSuiteAPI Additions and Fixes

- Item API - Fixed an issue with decimal rounding.
- OrderTransaction API - Fixed an issue where only one line item was returned when there were multiple items on the order.
- Customer API - Fixed an issue where only 1 address was returned during the sync process when multiple addresses were available.
- Employee API - Fixed an issue where Cashier Locations was throwing an error.
- Employee API - Fixed an issue where only one record was included in an array.
- OrderTransaciton API - If certain fields are left out of an update they are no longer reset to 0.
- Supplier API: Fixed an issue with supplier Sync address array.
- InventoryOrder API and InventoryOrderLine Item API - Fixed an issue with updating cost when changed in the api call.
