

Update Release Notes for version 5.51 - April 2021

Please be sure to clear the cache and cookies in your internet browser.

New Features

- Campaigns Wizard: A new interface for creating bundle campaigns and future home of additional types like BOGO & Mix and Match.
- Campaign Bundles: Ability to create campaigns that will bundle items together for a set price, and divide the savings amongst those items.
- Item Field Auditing: All changes to item fields for Item Master and Location records can be traced back to the user or system which made the change. Default configuration tracks Barcode Number, Description, Price, Cost, and deactivation process. This applies to the Item Module, Receivers, Data Imports, and Data Management.
- Three way match report: A reconciliation report that shows all placed purchase orders with cost totals for orders, receivers, and invoices
- Purchase Limits
 - Multiple categories can now be set to a single combined limit
 - Receipt Builder has added functionality to include purchase limit balances on receipts
- Multiple Item Images: A new interface has been created to handle multiple item images to OpSuite. This will enable OpSuiteShop users the ability to upload images to OpSuite to automatically sync to their webstore.

Bug Fixes and Updates

- Data Management
 - Item Master updates now properly sync to location records, and location records cannot update master records if the sync option is enabled.
 - Searching with the "matches" option no longer crashes the app in certain scenarios.
 - Updating an item in the grid no longer hangs on refresh
 - Item Location Detail formulas now properly update fields
 - The search bar no longer has issues displaying properly
- Campaign record time issues have been resolved
- Three way match
 - The export no longer improperly duplicates line items
 - Users can now see completed matches in the lookup
 - Sorting and filtering now works properly in the lookup
 - Searching with an empty field now returns all three way matches
