

## **Update Release Notes for version 5.52 - August 2021**

*Please be sure to clear the cache and cookies in your internet browser.*

### **New Features**

- **Finance**
  - Accounts Receivable (AR) now has the ability to apply finance charges.
  - 3-Way Matches have been revised to provide more helpful and readable information in the details table.
- **OpSuiteConnect**
  - OpSuiteConnect is a new module for creating and managing eMail/SMS marketing campaigns.
- **Receipts**
  - Full-page invoices can now be configured and managed in OpSuite, and applied to point-of-sale devices. Invoice formats can be previewed on-screen in OpSuite.
- **OpSuiteSHOP**
  - Reports have been reconfigured to include the shipping cost when viewing web orders.

### **Bug Fixes and Updates**

- **ILD Data Management:** When a field is actively being audited, it will no longer show an error when a user tries to edit it in Data Management.
- Corrected a link issue in the location manager role.
- Search pages within reports are no longer case-sensitive.
- **Accounts Receivable (AR):** Resolved an issue where certain Balance Forward account types could not close billing cycles correctly.
- Item prices are now validated against a minimum and maximum price limit.
- Campaigns created through the wizard interface will now show the correct start date.
- **Merchandising:** Users without the correct permissions cannot import cost changes to items in Purchase Orders, Transfer Orders, or Receivers.
- **Items:** Fixed an issue where the sku field was greyed out when Auto-Numbering was disabled.
